

Care of Sina Pearson Textiles Mehndi 353

Throughout the years Crypton® has recommended that a mild powered enzyme detergent mixed with water is a very effective way to clean Crypton fabrics. It still is. If you choose to use an enzyme detergent, mix 5 parts water with 1 part enzyme detergent (like Tide® / Cheer®).

EASY CLEANING STEPS

- If the spot has dried, try lightly brushing or scrape off the residual. Wipe with wet towel.
- If a spot still remains, apply the soap and water solution to the spot with a light mist.
- Work area using soft brush or edge of spoon from outside of spot towards the middle.
- Allow solution to work for approximately one minute.
- Extract with clean water or blot with clean soft white towel.
- Repeat steps 3-5 as necessary until spot is removed.
- Rinse with clear lukewarm water and blot with a clean soft white towel as the final step.

Again ...make positively certain all soap is completely removed as soap residue will attract more dirt.

HELPFUL HINTS

- Before cleaning, vacuum the upholstery.
- Never spread the spot to the surrounding clean fiber.
- Go slowly; repeat the steps until the spot is removed.
- Do not use a stiff brush that may scratch or tear fibers in the fabric.
- Always seek to reduce the size of the spot.
- As always, test the soap and water solution in a hidden area before proceeding.

STEAM CLEANING

Steam cleaning is another fine method of thoroughly cleaning Crypton fabrics. Spots can be removed by pre-treating them with the soap solution outlined above or a pre-treatment solution from the steam cleaning company. Most solutions provided by these companies are acceptable for Crypton fabrics.
